

UN-MANNED HOUSE

- Owners sometimes do not stay in the flats/bungalows they own.
- Access to the flat is required to be given for entry, based on demand for the following purposes:
 - Cleaning
 - Society side repair work
 - Maintenance
 - Miscellaneous

- Whenever the person looking for access reaches the flat/bungalow, they scan the QR code displayed on the main door for reading the door/station ID.
- This request from visitor with info & credentials(with Mobile Number) is posted on our Broker. This is posted to the Flat owner App based on the Station ID, for approval.
- Against Approval from the owner, a time based OTP is generated & texted to the Visitor mobile number & Access Control device in online mode.
- The OTP entered from the Key-pad Access Device installed at the Gate, is entered by the visitor for getting the access(within OTP specified time).
- The doors are monitored for being kept open or closed. This may be further integrated to IP Camera to monitor the movement of the visitor inside the unmanned site/flat.
